

How Scientists Help Our Planet

World Science Day is a special day that happens every year on November 10th. On this day, people all over the world think about how science can help make our planet a better place.

One way scientists help is by finding ways to clean up pollution. Pollution is when the air, water, or land gets dirty. Scientists work on making new machines that can clean the water in our lakes and rivers or make the air we breathe cleaner.

Another way scientists help is by planting trees. Trees are very important because they give us oxygen to breathe and make the world beautiful. Scientists plant trees in places where they have been cut down to help nature grow back.

World Science Day helps us remember that science can help solve big problems and keep our planet happy and healthy.

SCIENCE Reading Comprehension – Key Stage 1 – Year 1

1. What is World Science Day?
2. When is World Science Day celebrated?
3. How do scientists help clean up pollution?
4. Why are trees important for our planet?
5. What do scientists do to help nature grow back?
6. Why is World Science Day important?
